ORDER FORMS 61

INTRODUCTION

Each year the Federal Government prepares and releases thousands of quality publications. Human Resources Management surveyed this vast resource to identify, review and annotate materials developed since 1975 which are suitable for use by vocational education teachers. These materials are cited in eight separate volumes which are listed on the inside cover of this booklet. In addition to the traditional vocational education program areas, efforts were made to locate and annotate materials for use with the handicapped, disadvantaged, older Americans, displaced homemakers, youth and clientele of CETA programs. Also, general references for vocational and career education are included in each booklet. While these listings are by no means exhaustive, the materials are representative of both print and nonprint materials which can be obtained free or for a nominal charge from federal organizations. Every attempt possible has been made to ensure that the organizational names are the latest and most accurate. However, materials from the former U.S. Department of Health, Education and Welfare (HEW) were developed and annotated prior to the recent division of the Department into the Department of Health and Human Resources and the new Department of Education. Thus, the old name HEW has been used.

[Since this bibliography was prepared, some items may have been discontinued or have price increases. You may wish to write the source for updated information before placing an order with payment.]

HOW TO USE THIS LISTING

Materials selected for inclusion in this booklet have been placed under the subject headings as given in the table of contents. The basic format used for each title entry is composed of three sections:

- **bibliographical information** listing the title, publication number, type of material, personal author, federal sponsor, publisher, publication date, number of pages, and the price
- **a source code** which gives the federal organization from which the material can be ordered and the appropriate stock or order number or letters
- **an annotation** or explanatory notes giving the use and intended users of the material

The same format has been used in citing both printed and audiovisual materials. In cases where a series has been cited, the title of the series and other information common to all its volumes are contained in the bibliographical information section. Following the source section, individual entries for each of the volumes are listed.

The examples below detail the various components of an individual entry and an entry for a series:

SOURCE AND ORDERING INFORMATION

The names and addresses of the sources from which materials described in this volume can be ordered are listed below. In addition, ordering information and brief descriptions of some of these sources are included. Requests for materials or information should be directed to the specific offices as indicated. Since the source of the material is not always the same as the federal sponsor, it is important that the information on the "source code" line be used for ordering. Most offices will accept checks or money orders but not currency. Sources vary as to which charge cards are acceptable, discount rates, arrangements for deposit accounts, order forms and guidelines, special mail handling requirements, and availability of materials on microfiche or computer magnetic tapes. Write individual sources for details. Since many of these materials can be ordered from either the Government Printing Office or the National Audiovisual Center (Government Services Administration), order blanks for these two sources can be found at the back of the booklet. Please note that prices are subject to change. Most materials may be delivered sooner, but allow 30 to 60 days for delivery.

Educators can be instrumental in helping with our nation's energy future by teaching our young adults about the potential of solar energy. These books comprise a program that is designed to help teachers meet this objective. The project contains numerous activities on the topic of solar energy to be used with students in grades 7-12. For convenience each volume is punched to fit a 3 ring binder. The following are available:

Biology. One activity will show students a way to use some of the solar energy stored in plants to produce heat. Others will enable students to estimate their family's annual energy needs, to convert waste into fuels, and to compare the cost of using wood, oil, coal, natural gas, and electricity to produce heat. 1979. 35pp. ill. $1.70 ea. S/N 061-000-00230-8.

Chemistry And Physics. How many light bulbs do you think would have to be turned on to equal the energy produced by the sun? One of the activities in this book compares the sun's energy to the energy of a 100-watt light bulb. Other activities include: constructing a flat plate air flow solar collector, measuring energy from the sun, measuring the heat of a

solar collector, and examining the effects of surface heating. 1979. 74pp. ill. $2.20 ea. S/N 061-000-00229-4.

SOLAR ENERGY PROJECT. Department of Energy, Office of the Secretary.

Source: GPO

Educators can be instrumental in helping with our nation's energy future by teaching our young adults about the potential of solar energy. These books comprise a program that is designed to help teachers meet this objective. The project contains numerous activities on the topic of solar energy to be used with students in grades 7-12. For convenience each volume is punched to fit a 3 ring binder. The following are available:

Biology. One activity will show students a way to use some of the solar energy stored in plants to produce heat. Others will enable students to estimate their family's annual energy needs, to convert waste into fuels, and to compare the cost of using wood, oil, coal, natural gas, and electricity to produce heat. 1979. 35pp. ill. $1.70 ea. S/N 061-000-00230-8.

Chemistry And Physics. How many light bulbs do you think would have to be turned on to equal the energy produced by the sun? One of the activities in this book compares the sun's energy to the energy of a 100-watt light bulb. Other activities include: constructing a flat plate air flow solar collector, measur-

ing energy from the sun, measuring the heat of a solar collector, and examining the effects of surface heating. 1979. 74pp. ill. $2.20 ea. S/N 061-000-00229-4.
